

Coated Aluminium for Closures

Innovative coating cycles

We developed **innovative coating cycles** for aluminium closures:

- **Single Coating System** for low capsules
- **Double Coating System** for high capsules (30x60)
- **Inner Side Coating** to ensure adhesion of liner
- **Upon request, coating could be BPA N.I.A.** ("Bisphenol A - Not Intentionally Added")

The importance of Research&Development

We consider **R&D** a job to be carried out in synergy with our Customers. The **qualitative improvement** of our lacquered rolled products is granted through the continuous commitment in developing **new production processes** and **technologies**.

We care about sustainability

We improve continuously the **resource optimization** to increase production efficiency.

We work hard to **reduce consumption** of water, energy and paper; to **control and limit emissions**, to **manage effectively harmful substances** and waste.

Thickness range: 0,18 - 0,24 mm

Typical Alloys: 3xxx - 5xxx - 8xxx

Advantages of coated aluminium for closures

Design and Customization

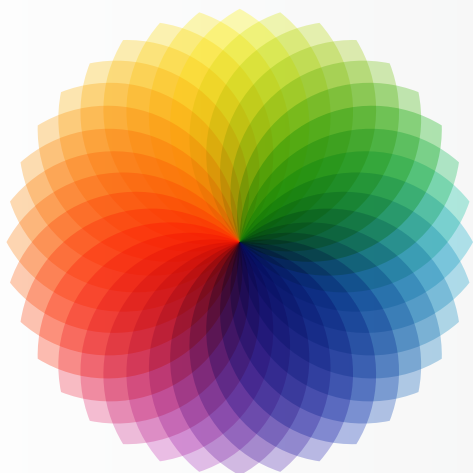

Perfect adhesion of coating

Protection for aroma and taste

Hygiene

Resistance to corrosion

All colours are available, upon request.

All lacquers can be provided in the **opaque**, **semi-opaque**, **bright**, **semi-transparent** and **transparent** version.
