

Al - PP Laminated Alu for food packaging

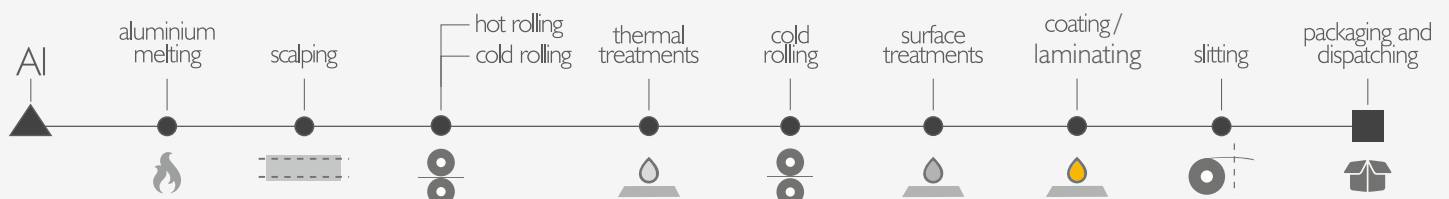

Italcoat supplies **coated aluminium** laminated with **polypropylene film** through sterilizable **glue** to manufacturers of **containers** for aggressive food. Suitable to a retort process with a long shelf life.

PRODUCT DESCRIPTION

Our aluminium foil, **chemically degreased** and **pre-treated**, is subject to accurate **quality controls** according to the **GMP** (Good Manufacturing Practices) of all European regulations for **food contact material**.

How we manufacture Al-PP laminated aluminium for food packaging

Technical Specifications

Alloy: 3xxx - 8xxx

Temper: "0"

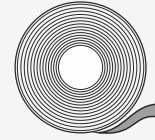

Thickness: 0,08 to 0,14 mm

Width: max 1300 mm

Available colour: gold

Polypropylene thickness: 0,03 mm

Dry glue Grammage: 5-6 g/m²

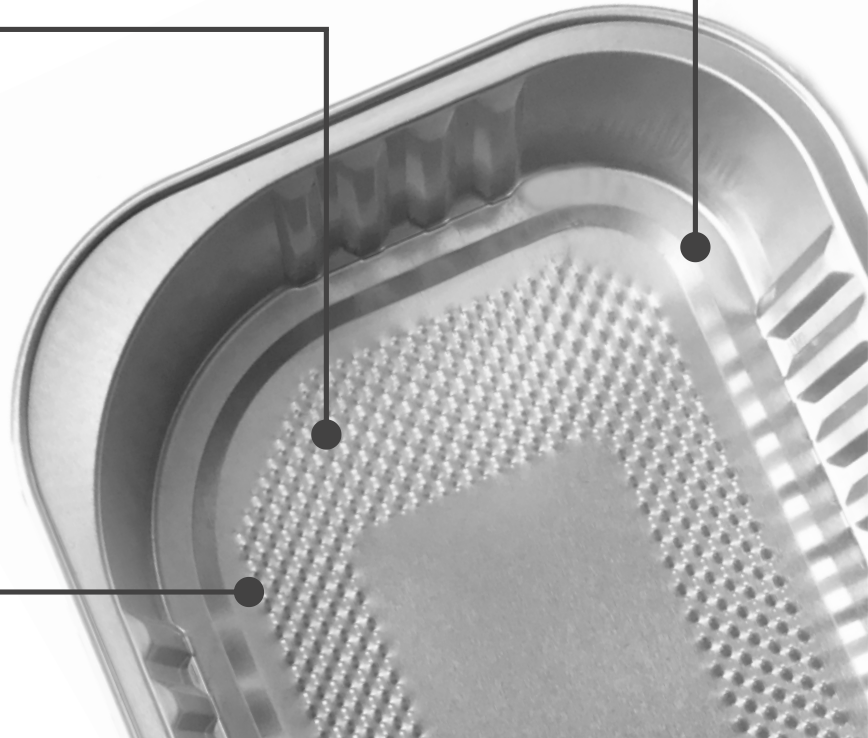

all the advantages

High corrosion resistance:

the laminate has been specifically developed to contain food with an **aggressive pH** or **high salinity**, increasing shelf life

■ Suitable for **sterilization** and **retorting** processes

■ **Polypropylene film** and **Glue** have been developed to guarantee the **perfect adhesion** of the laminate during the **manufacturing process**

Coating enhances the **aesthetic identity** of containers and trays: personalisation and quality augment the visual experience of consumers
